# **WEATHER SYNOPSIS BY REGION**

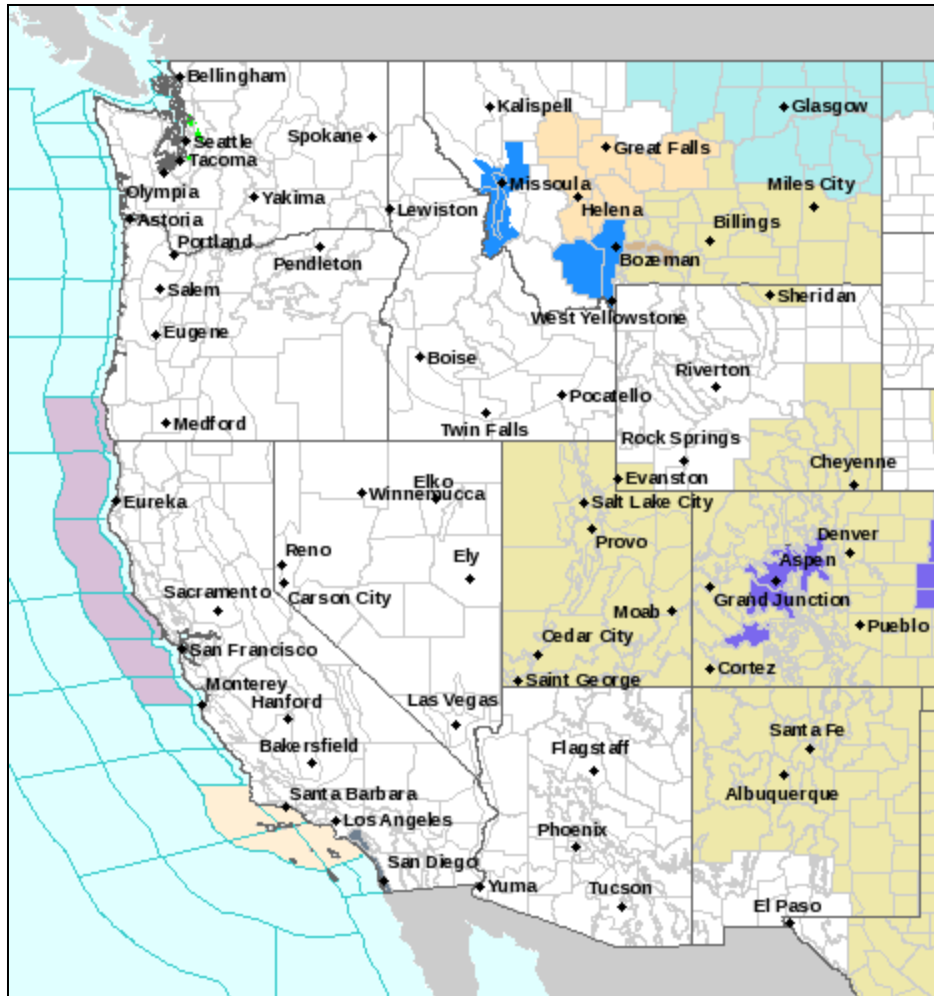

## **NORTHERN CALIFORNIA**

Strong high pressure just west of California will be stationary through Friday. This pattern will produce mostly clear skies and well above normal temperatures under a dry northwest to north flow aloft. Afternoon temperatures will be as much as 20 degrees above normal with minimum relative humidities (RH) which should reach 18-28%. North to northeast surface winds will gust to 25 mph or so in the typical areas from the western Cascade-Sierra slopes to the coast can be expected each night and morning. However, a stronger period of north to northeast offshore winds will occur today, with peak gusts reaching 30-40 mph. These winds will be on the western Cascade-Sierra slopes, throughout the Sacramento Valley and surrounding foothills, mid and southern coastal areas, and in the wind-prone portions of the Bay Area today. Computer models are showing a potentially stronger wind north to northeast wind event Friday evening through Sunday afternoon, with peak gusts reaching 50 mph or more in the same areas.

## **SOUTHERN CALIFORNIA**

The strong ridge of high pressure that has been off the California Coast for the last week will weaken slightly bringing a few degrees of cooling and a little higher humidity to the region today. Maximum temperatures will be in the upper 50s and 60s across the mountains and in the 70s to low 80s in the valleys. Minimum humidity will be mainly between 12% and 25% away from the San Joaquin Valley and coast. Winds will be light through Tuesday. The ridge off the California Coast will strengthen again causing temperatures to rise to 10 to 15 degrees above normal and minimum humidity to drop into the single digits and teens Wednesday and Thursday. There will be local northeast to east winds of 10 to 20 mph with gusts to 35 mph across the mountains and below the canyons and passes of Southern California Wednesday morning through Thursday morning. Temperatures will slowly cool and humidity will gradually increase Friday through this weekend as the ridge of high pressure off the California Coast weakens.
